DISSEMINATION by The Livingston Group
FARA registration #6344

Information that raises questions about whether the U.S. government continues its interest in the disposition of the Democratic Republic of Congo's fuel rods, developed as part of the Atoms for Peace project and the construction of a TRIGA-class nuclear research reactor, is of sufficient concern to our own national security interests as to provide further rationale for arranging high-level meetings between U.S. government officials and the DRC's special envoy to the U.S., Raymond Tshibanda, when he visits Washington next month.

Given the Trump Administration's focus on nuclear and other such related issues, an opportunity to discuss the disposition of these materials is particularly timely and propitious.

THE LIVINGSTON GROUP PROVIDES REPRESENTATION FOR THE GOVERNMENT OF THE DEMOCRATIC REPUBLIC OF CONGO, THROUGH MER SECURITY AND COMMUNICATION SYSTEMS, LTD. ADDITIONAL INFORMATION IS AVAILABLE AT THE DEPARTMENT OF JUSTICE, WASHINGTON, DC.
